

If your Doctor has identified nickel or cobalt as a cause of your contact eczema/contact dermatitis, we have the following products to assist with managing your allergy: -

CHEMO NICKEL TEST & CHEMO COBALT TEST @ £21.78 + P&P

The CHEMO NICKEL TEST will help you identify metal objects that contain Nickel and the CHEMO COBALT TEST will help you identify metal objects that contain cobalt (both 8ml, approx. 50 tests per bottle).

You can test any metal object in your home and work environment (e.g. press studs, keys, hooks, zips, earrings, bracelets, rings, coins, kitchen utensils, door and drawer handles, screws in glasses, paper clips, etc.) and this will help you identify which items to avoid, change or cover in some way.

Wood, plastic, gold and stainless steel are usually safe substitutes for items that don't contain nickel or cobalt.

For more information see www.chemotechnique.se/products/products/
